

Innovative Practice of Israel's Government Procurement

Innovative Practice of Israel's Government Procurement

Government procurement is an important pillar of government services. Because of the huge number of government purchases, government procurement management play an important role in promoting public sector efficiency and building citizenship. Well-designed government procurement systems also help to achieve policy such as environmental protection, innovation, start-ups and the development of small and medium-sized enterprises.

Nowadays, countries in the world, especially OECD countries, have been widely practiced with innovative procurement to stimulate innovation and start-ups, and call Innovation procurement can deliver solutions to challenges of public interest and ICTs can play a major role in this. However, in the OECD countries, in addition to the advanced countries that have been developed, many developing countries have also used government procurement to stimulate national R & D and innovation with remarkable results. Israel is one of the world's leading technology innovation centers, one of the most innovative economies in the world, continues to leverage its own strengths, support of technology entrepreneurship and unique environment, an international reputation in the high-tech industry, the spirit of technological innovation and novelty.

Government procurement is a core element of the activities of Israeli government, agreement with suppliers and compliance with the Mandatory Tenders Law. The main challenge is how to ensure efficiency and maintain government performance while ensuring an equitable and transparent procurement process. Israel's Mandatory Tenders Law has shown the central role played by the Israeli Supreme Court in creating and developing this law, even in the absence of any procurement legislation, based instead on general principles of administrative law. Once the project of creating a detailed body of public tendering law had been completed, and the legislator was about to step in, the Supreme Court was prepared to step out and transferring the jurisdiction to lower courts. The Knesset passed the Mandatory Tenders Law, and based on it the Government issued the various tendering regulations. Besides, Israel's various international agreements on government procurement, mainly GPA and other bilateral international agreements such as free trade agreements with Mexico and Colombia and free trade agreements and memoranda of understanding with the United States. The practical significance of these commitments can only be understood on the backdrop of Israel's domestic preference and offset policies. These policies were therefore discussed and analyzed as they apply when none of the international agreements applies.

The Challenge Tenders "How to solve the problem of overcrowding in the emergency department and the internal medicine department?" is the first of a series of "problem solicitations" released by the Israeli Ministry of Health which seeks to find a digital solution to the public health system problem, questions from the government while avoiding preconceived prejudices affect the nature of the solution, allowing multiple innovative ideas from different fields to enter the health system, make fair and transparent judgments about the ideal solution to the problem. In order to ensure transparency and integrity, equality, efficiency and competition in the decision-making process, the tender proposed by the Israeli Ministry of Health defines a two-stage tender process. The Ministry of Health of Israel, in order to improve the quality of medical care, shorten the waiting time for hospitalized patients, protect the dignity of patients and their families with patients as its center, and ensure their rights, while alleviating the burden of hospital staff, so as to pass the targeted treatment areas reduce the gap between various residential areas. The Israeli government deals with these issues through challenging tenders and offers a digital solution combined with

innovative ideas. The initiative proposed through the development of public service projects can raise the level of public services in the country and help the government to reduce costs and achieve the purpose of promoting innovation with limited conceptual, technical and financial capabilities. In addition, due to the online operation of the challenging tender process throughout the entire process, fair and transparent procedures can be ensured, while public-private partnerships are encouraged to facilitate the implementation of the implementation plan.
